Note: The results relate only to the specimens tested and should be correlated with clinical finding.

Result is given for SARS-Cov-2 only.

Interpretation Guideline

- * Please insure and maintain the confidentiality of the test report
- * A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.
- * Repeat sampling and testing of lower respiratory tract is strongly recommended in severe or progressive disease.
- * A positive alternate pathogen doesn't necessary rule out either, as little is yet known about the role of coinfections. Testing for non-viral agents has not been undertaken .
- * Please note that these results are not to be used for any thesis or presentation or for publication or for Publication in any Journal
